

Pyramid pawns to print and assemble

These pawns are very easy to assemble for your board games. Print and build as many as you like on some strong paper.

Building triangular pawns

1. print
2. cut around the edge (a)
3. fold on the 4 lines (b)

note: it is easier to fold when you press the blade of scissors or a knife along the lines to fold (b). Use a ruler to be more precise.

4. assemble : glue or staple the gray area (c) into the inside of the pyramid.
Or better yet, tape the gray area onto the last color side (d) : this will reinforce the pawn.
